Technical Data MERV 8 Pleated filters

MERV 8 filters are engineered to deliver the lowest restriction possible in an air filter while still delivering a good base level of filtration to protect people and systems against airborne particulate.

Our MERV 8 filters are the ideal choice for maximizing energy savings or for environments requiring high demands on an HVAC system. Extremely hot or cold climates and systems that may be undersized compared to the area of the controlled environment create unique circumstances where it's important to balance protective filtration properties while minimizing system restriction. In these instances, MERV 8 filters are an excellent choice.

**MERV 10, nano enhanced media is available upon request with a slight upcharge in price. Pressure drops are almost the same as MERV 8 products. (minimum order quantities may apply)

SPECIFICATIONS	
Efficiency per 52.2 @ 1968 CFM	MERV 8 @ 0.21 W.G.
Filter Depths Available	1", 2", and 4"
Pleat Quantity	10 Pleats / foot Standard Cap 15 Pleats / foot High Cap
Media Type	Synthetic
